- Chinese Remainder Theorem:
  if $m_1, m_2, \ldots, m_n$ are coprime with each other, then
  $$\begin{cases} x \equiv a_1 \pmod{m_1} \\ x \equiv a_2 \pmod{m_2} \\ \cdots \\ x \equiv a_n \pmod{m_n} \end{cases}$$
  could be solved by Chinese Remainder Theorem.
  1. Let $M = m_1 \times m_2 \times \cdots \times m_n$ and let $M_i = \frac{M}{m_i}$
  2. Find t_i s.t. $M_i \cdot t_i \equiv 1 \pmod{m_i}$ by Extended Euclidean algorithm.
  3. For any integer k, there exists general solution
  $x = a_1 t_1 M_1 + a_2 t_2 M_2 + \cdots + a_n t_n M_n + kM = kM + \sum_{i=1}^{n} a_i t_i M_i$
